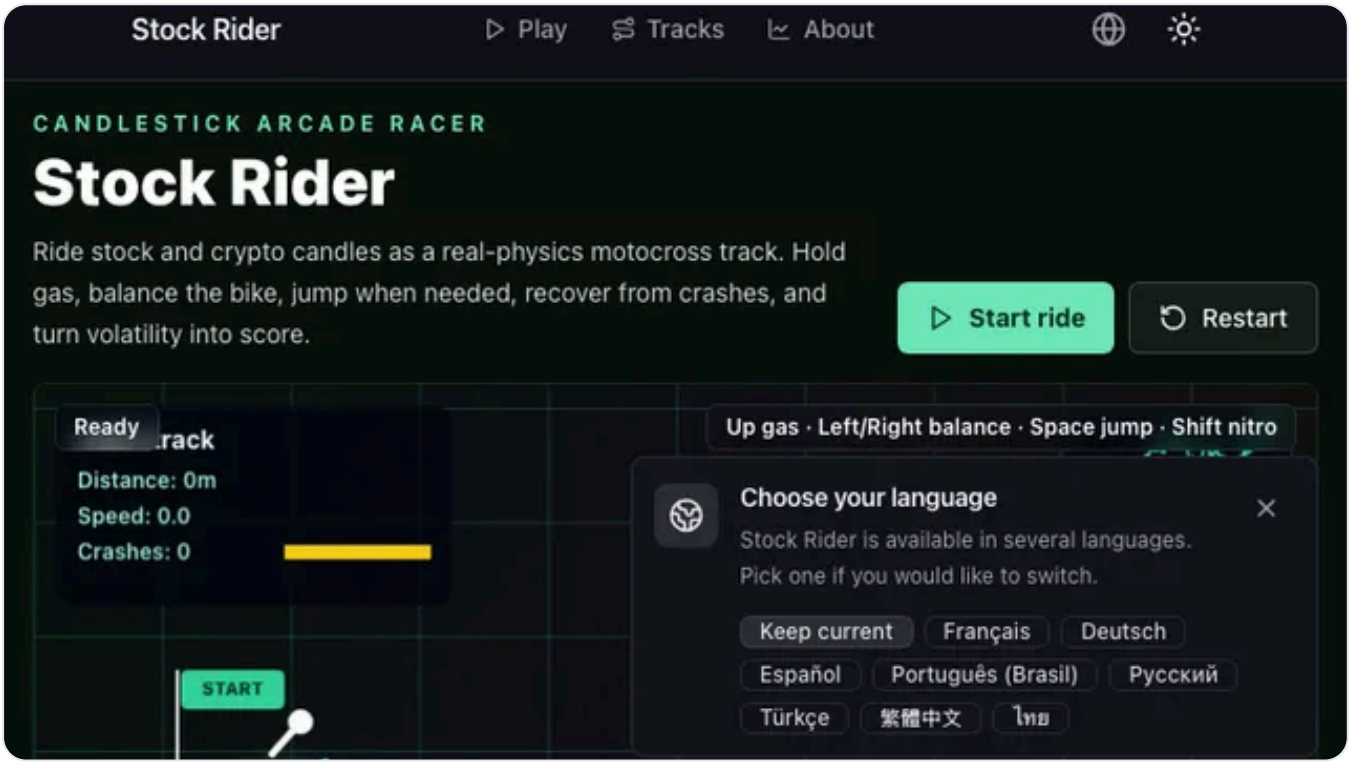
Stock Rider

A browser racing game that turns real OHLCV charts into motocross tracks.



About

Stock Rider is a stock candlestick chart racing game that turns real daily OHLCV data into a motocross-style browser track. It lets you ride through market shape instead of staring at a flat chart, using price movement, volatility, and clean landings as part of the score. The app supports recognizable tickers like AAPL, AMZN, TSLA, NVDA, BTC, ETH, and more, and it builds each run from market data before play starts.

What is Stock Rider

Stock Rider is a stock candlestick chart racing game built around real daily OHLCV data.

lows, and volatility become a physics track in the browser. The game blends finance data with arcade action, so a calm line feels like a smoother course while a jumpy chart becomes a harder ride.

The app describes itself as a candlestick arcade racer and makes the road from actual market history. It fetches five years of daily OHLCV candles before building the track, so the run is based on real data rather than a fixed handmade level. That makes Stock Rider part game and part market visualization, with the chart itself acting as the level design.

Key features

- Real daily OHLCV track generation from stock and crypto tickers, including AAPL, AMZN, TSLA, NVDA, BTC, ETH, SOL, and GME.
- Browser-based motocross physics that use candle shape to define slope and ride difficulty.
- Score pressure tied to progress, clean recovery, tricks, nitro timing, and finishing the course.
- Checkpoint-style recovery after crashes, so mistakes do not immediately end the run.
- A visible preview area with track info such as time, score, combo, best, max slope, price range, and candle count.
- Keyboard controls on desktop and touch-friendly controls on mobile.
- Track selection that includes both steadier names like AAPL, MSFT, and SPY and more volatile picks for harder runs.

Stock Rider is not a portfolio dashboard or trading terminal. It is a stock candlestick chart racing game, and that distinction matters: the point is to play the chart, not to analyze it with indicators or place trades. The OHLCV feed is there to create the ride, not to provide market advice.

How to use it

- Open the site and wait for the market data to load.
- Choose a track from the available stock or crypto tickers.
- Start the run once the road is built from the selected OHLCV candles.

Desktop controls are simple:

- Up/W: gas
- Left/A: lift the front wheel
- Right/D: push the nose down
- Space: jump when grounded
- Shift or N: nitro
- Down/S: light brake

On mobile, the left side is used to lean, the right side for gas, and tapping triggers a jump. That makes Stock Rider usable on both desktop and phone without changing the core stock candlestick chart racing game loop.

The best way to approach the game is to start with a smoother symbol such as AAPL or SPY, then move to more volatile names like TSLA, NVDA, BTC, or ETH once you understand how the terrain responds. The app rewards control as much as speed, so the stock candlestick chart racing game plays best when you treat each chart like a course with its own rhythm.

Who it is for

Stock Rider is a fit for people who want a playful way to look at market data. It works well for:

- Casual players who like browser games with a short learning curve.
- Finance-curious users who want daily OHLCV data presented in a more interactive format.
- Teachers or students looking for a memorable way to discuss candles, volatility, and price movement.
- Crypto and stock fans who already recognize symbols like AAPL, TSLA, BTC, and ETH.

If you enjoy arcade physics, track racing, or data visualizations with a game layer, Stock Rider offers a clear novelty. The stock candlestick chart racing game format is especially appealing when you want to compare how different assets feel as tracks.

Stock Rider depends on loading real market data first, so there can be a wait before the course appears. The site says it fetches five years of daily OHLCV candles, which means availability can depend on data access and the selected symbol.

A few limits are worth keeping in mind:

- It uses daily OHLCV candles, not intraday ticks, so it is not built for day-trading precision.
- It is a game, not a brokerage platform, and it does not replace an official market terminal.
- Highly volatile assets can create harder tracks and more crashes, which is part of the design.
- The app is about entertainment and learning through play, so do not use it as a source for trade decisions.

For current quotes, chart analysis, or investing decisions, use an official finance source or your brokerage platform instead. Stock Rider is best when you want to experience market shape as a stock candlestick chart racing game, not when you need authoritative financial data.

FAQ

Is Stock Rider free to play?

What assets can I ride in Stock Rider?

What platforms does Stock Rider run on?

How does Stock Rider turn market data into a track?

What data does Stock Rider use to build a track?
